

Canadian spotlight 25.1: Key additions from the month of January 2023

In the month of January, contributing Canadian evidence-synthesis teams have shared with us three newly completed evidence syntheses which are listed in the table below. From the COVID-END inventory, the syntheses provided insight focused on public-health measures (n=3).

Taxonomy section	Title	Type of product	Date of last search (and publication)	Evidence synthesis team
<ul style="list-style-type: none"> Public-health measures 	What is the effectiveness of available COVID-19 vaccines for children and adolescents, including variants of concern?	Update to a living evidence synthesis	2023-01-17 (published 2023-01-18)	Health Information Research Unit, McMaster University
<ul style="list-style-type: none"> Public-health measures 	What is the long-term effectiveness of available COVID-19 vaccines for adults, including for variants of concern and over time frames beyond 112 days in those with a primary series and beyond 84 days in those with a primary series and an additional dose?	Update to a living evidence synthesis	2023-01-18 (published 2023-01-18)	Health Information Research Unit, McMaster University
<ul style="list-style-type: none"> Public-health measures 	What is known about the response of the Public Health Network and Special Advisory Committee in Canada to the COVID-19 pandemic?	Rapid review	2023-01-17 (published 2023-01-30)	National Collaborating Centre for Methods and Tools
