

# Supporting the COVID-19 Evidence Response

**OECD Health Division, 29 October 2020**

John N. Lavis, MD PhD, Co-Lead, COVID-END;  
Director, McMaster Health Forum; and Professor, McMaster University

Jeremy Grimshaw, MBChB PhD, Co-Lead, COVID-END;  
Senior Scientist, OHRI; and Professor, University Of Ottawa

David Tovey, MBChB FRCGP, Senior Advisor, COVID-END

HEALTH FORUM

The Ottawa  
Hospital  
Centre for Implementation  
Research

# Acknowledgements

- Funding for COVID-END
  - Government of Ontario (through a grant to Rapid-Improvement Support and Exchange, or RISE), which supports the locally focused parts of our work
  - National Institute of Health Research (Evidence Synthesis Program), UK
  - Individual donors through the Centre for Effective Altruism and Fidelity Charitable, USA, and private individual donors

# COVID-END

- **Time-limited network** that has come together in response to the COVID-19 pandemic to help
  - Those supporting decision-making about COVID-19 to find and use the best available scientific evidence (i.e. evidence-demand side)
  - Researchers to avoid waste by reducing duplication in and better coordinating the COVID-19 evidence syntheses, technology assessments & guidelines being produced (i.e., evidence-supply side)
- Partners include **50+** of the world's leading evidence-synthesis, technology-assessment, and guideline **groups**
- Covers the **full spectrum** of pandemic responses
  - Public-health measures, clinical management, health-system arrangements, and economic & social responses
  - High-income and low-and-middle-income country contexts

# COVID-END Resources for Those Supporting Decision-making (<https://www.covid-end.org>)

- **Inventory of ‘best’ evidence syntheses for COVID-19 decisions**
- **Horizon scans for emerging issues**
- Community of those supporting decision-making
- Living hub of COVID-19 knowledge hubs
- Additional supports
  - Guide to COVID-19 evidences sources
  - Evidence-packaging resources
  - Evidence-support models
  - Tips and tools

# COVID-END Resources for Researchers

(<https://www.covid-end.org>)

- Priorities for new evidence syntheses and guidelines (coming soon)
- **Supports for evidence synthesizers**
- Supports for guideline developers (coming soon)

# Case for Doing Things Differently As We Transition from a Sprint to a Marathon

- ‘Study slinging’ (or ‘anecdote chasing’) and GOBSATT have created a very **high noise-to-signal ratio**
- One-off reviews on long-term and recurring issues are quickly **out of date**
- Many rapid (and full) reviews are of **low quality**
- Few reviews about interventions provide a GRADE evidence profile that speaks to the **level of certainty** of the available evidence
- Too many evidence syntheses address the **same topic** (e.g., >200 prognostic reviews and only 5 such reviews address  $\geq 5$  factors)
- Too many key decisions have **no available evidence synthesis** (let alone a living evidence synthesis that is updated as new studies are published)
- The small number of existing **living evidence syntheses** often address same topic (e.g., 3 living network meta-analyses of COVID-19 treatments)

## Case for Doing Things Differently As We Transition from a Sprint to a Marathon (2)

- More on ‘study slinging’ (or ‘anecdote chasing’) and GOBSATT → **Start with** recently updated, high-quality **evidence syntheses, which**
  - Reduce the likelihood that decision-makers will be **misled** by research (by being more systematic and transparent in the identification, selection, appraisal, and synthesis of studies)
  - Increase **confidence** among decision makers about what can be expected from an intervention (by increasing the number of units for study)
  - Allow decision makers to focus on **how findings do or don’t vary by context and population (ideally using an explicit equity lens) and hence what the evidence means for a specific jurisdiction at a specific moment in time**
  - Allow stakeholders, including public interest or civil society groups, to **constructively contest** research evidence because it is laid out for them in a more systematic and transparent way
- These evidence syntheses are distinct from **jurisdictional scans**

# What Does the Marathon Look Like?

- **Inventory of best evidence syntheses** for COVID-19 decisions
  - ‘Best’ defined by recency of search, quality of review, and GRADE evidence profile availability
  - Declarative title to facilitate relevance assessments (e.g., PICO and certainty level)
  - Additional information about ‘living’ status, synthesis type, and synthesis question
- **Horizon scans** for emerging issues and topic prioritization
  - Monthly briefing note drawing on horizon scans from around the globe
  - Monthly meeting of a panel of 36+ diverse strategic and ‘out-of-the-box’ thinkers and doers (with diversity defined in relation to our taxonomy, target audiences, WHO regions, and primary languages spoken)
- **List of priority topics** for living evidence syntheses (and efforts to encourage, nudge and cajole teams to take them on)
- **Robust local efforts to contextualize** the evidence for decision-making
  - E.g., rapid-evidence profiles in 4 hours, 1 day, 2 days or 3 days (which provide both ‘best evidence’ and **jurisdictional scans**)

# Where Are We in the Transition to Marathon?

- Inventory of best evidence syntheses for COVID-19 decisions
  - **2,800+ harvested** (with PROSPERO protocols our only key source outstanding)
  - 2,100+ non-duplicates
  - 1,000+ decision-relevant syntheses included in database
  - **110+ included** in inventory based on three criteria for 'best' evidence syntheses
- Horizon scans for emerging issues and topic prioritization
  - Four monthly panel meetings to date (with all **reports available on our website**)
  - Starting to use up and down voting for priority topics for evidence syntheses
- List of priority topics for living evidence syntheses (and efforts to encourage, nudge and cajole interdisciplinary teams to take them on, plus tips for teams)
  - **First draft of the list will be posted by Monday** and team building to begin soon

# What's on our List of Priority Topics for Living Evidence Syntheses?

- Public-health measures
  - Supporting **adherence** to measures, including better communicating the rationale including trade-offs (including in politicized contexts and for politicized issues)
  - **Strategies** for testing and for test-track-trace approaches that optimize the use of existing capacity
  - Outbreak **contributors** (from interdisciplinary outbreak studies)
  - Surveillance, analytic and synthesis **capacity** in public-health units **and linkages** to other parts of the health system
- Clinical management of COVID-19 and pandemic-related conditions
  - **Long COVID** (among people without severe COVID) and/or long-term sequelae of severe COVID
  - Screening for and managing emergent **mental health** and substance use issues
  - **Concurrent management** of COVID-19 and other (seasonal) infections
  - Emergence of **endemic diseases** in urban environments

# What's on our List of Priority Topics for Living Evidence Syntheses? (2)

- Health-system arrangements
  - Managing **vaccine** purchasing, allocation, ordering, distribution and inventories under shortage conditions, leveraging vaccine trust and addressing vaccine hesitancy, and capturing lessons learned from roll-outs
  - Approaches to **strategic purchasing** of supplies and equipment (e.g., personal protective equipment and liquid nitrogen for vaccine storage) that balance accountabilities up & out
  - Responsive and agile
    - Restoration of **non-COVID services** when possible (by developing or capitalizing on 'slack' within health systems)
    - Efforts to address **health human resource** shortages (and motivation & wellbeing)
  - Consolidating and optimizing the value achieved through shifts in **virtual care**
  - **Packages of responses** (public-health / health-system) and **combinations of centralized & decentralized approaches** (from studies of variations in response to local and regional outbreaks and/or changes in incidence rates)

# What's on our List of Priority Topics for Living Evidence Syntheses? (3)

- Economic and social responses
  - **Culture and gender** - Additional risks of **gender-based and domestic violence** arising from restrictions and appropriate ways to address such violence
  - **Education** - Benefits and harms to students, educators and families arising from **school** closures, re-openings and **operations** as well as for pedagogical innovations that can support ongoing education
  - **Financial protection** - Enhancing **financial security** by adjusting 'safety nets' and supporting workforce (re)training
  - **Food safety and security** – Approaches to addressing food supply-chain challenges and **food poverty**
  - **Climate action** – Additional risks of **environmental crisis** and maximizing the opportunity for synergies between the COVID-19 response and climate action
  - **Transportation** - Managing the risks related to **tourism** and **travel**
  - **Citizenship** - Linking **community participation** in the pandemic response with outcomes and capturing innovations in participatory approaches

# Tips for Teams Taking Up Priority Topics for Living Evidence Syntheses

- Consider committing to explicitly
  - Foreground **equity** considerations
  - Examine **benefits and harms** (health outcomes but also economic and social outcomes), citizen experiences, and costs
  - Acknowledge variation in **state capacity**
- Consider **interdisciplinary teams** (e.g., laboratory, IPAC, engineering, data modeling, outbreak studies, behavioural & social sciences, equity, science communication, citizens) alongside methodological experts
- Consider committing to **explicit cycles or triggers for updating** living evidence syntheses (and/or at least to finding a home for an evidence synthesis when an emergent issue becomes long-term or recurring and needs to become a living evidence synthesis)
