

Appendices for COVID-19 Living Evidence Profile #3

(Version 3: 23 September 2021)

Appendix 1: Methodological details

We use a standard protocol for preparing living evidence profiles (LEP) to ensure that our approach to identifying research evidence as well as experiences from other countries and from Canadian provinces and territories are as systematic and transparent as possible in the time we were given to prepare the profile.

Identifying research evidence

For each LEP, we search our continually updated [inventory of best evidence syntheses](#) and [guide to key COVID-19 evidence sources](#) guidelines, which we define as providing recommendations or other normative statements derived from an explicit process for evidence synthesis.

Each source for these documents is assigned to one team member who conducts hand searches (when a source contains a smaller number of documents) or keyword searches to identify potentially relevant documents. A final inclusion assessment is performed both by the person who did the initial screening and the lead author of the living evidence profile, with disagreements resolved by consensus or with the input of a third reviewer on the team. The team uses a dedicated virtual channel to discuss and iteratively refine inclusion/exclusion criteria throughout the process, which provides a running list of considerations that all members can consult during the first stages of assessment.

During this process we include published, pre-print and grey literature. We do not exclude documents based on the language of a document. However, we are not able to extract key findings from documents that are written in languages other than Chinese, English, French or Spanish. We provide any documents that do not have content available in these languages in an appendix containing documents excluded at the final stages of reviewing.

Identifying experiences from other countries and from Canadian provinces and territories

For each LEP, we collectively decide on what countries to examine based on the question posed. For other countries we search relevant sources included in our continually updated guide to key COVID-19 evidence sources. These sources include government-response trackers that document national responses to the pandemic. In addition, we conduct searches of relevant government and ministry websites. In Canada, we search websites from relevant federal and provincial governments, ministries and agencies (e.g., Public Health Agency of Canada).

While we do not exclude countries based on language, where information is not available through the government-response trackers, we are unable to extract information about countries that do not use English, Chinese, French or Spanish as an official language.

Assessing relevance and quality of evidence

We assess the relevance of each included evidence document as being of high, moderate or low relevance to the question. We then use a colour gradient to reflect high (darkest blue) to low (lightest blue) relevance.

Two reviewers independently appraised the quality of the guidelines we identified as being highly relevant using AGREE II. We used three domains in the tool (stakeholder involvement, rigour of development and editorial independence) and classified guidelines as high quality if they were scored as 60% or higher across each of these domains.

Preparing the profile

Each included document is hyperlinked to its original source to facilitate easy retrieval. For all included guidelines, we prepare a small number of bullet points that provide a brief summary of the key findings, which are used to summarize key messages in the text. We then draft a brief summary that highlights the total number of guidelines identified, as well as their key findings, date last updated or published, and quality.

Appendix 2a: Key findings from new guidelines that address the question, sorted by relevance to the question and COVID-19

Type of document	Relevance to question	Key findings	Recency or status
Guidelines	<ul style="list-style-type: none"> • When should adjustment be made? <ul style="list-style-type: none"> ○ Case rates and other epidemiological indicators ○ Vaccination-related factors • Where should measures be changed? <ul style="list-style-type: none"> ○ Grade schools <ul style="list-style-type: none"> ▪ Kindergarten and elementary schools ▪ High schools ○ Post-secondary institutions • What measures should be changed? <ul style="list-style-type: none"> ○ Operation of schools <ul style="list-style-type: none"> ▪ Online instruction (whole or partial) ▪ Classroom changes ○ Operation of residences in post-secondary schools <ul style="list-style-type: none"> ▪ Building occupancy ▪ Room occupancy ▪ Access to and rules for common spaces for gatherings ○ Engagement in extracurricular activities <ul style="list-style-type: none"> ▪ Intramural ○ Accompanying public-health measures <ul style="list-style-type: none"> ▪ Infection prevention <ul style="list-style-type: none"> ○ Washing hands ○ Wearing masks ○ Disinfecting surfaces and facilities ○ Physical distancing ○ Ventilation maximization ○ Public-focused behaviour-change supports ▪ Infection control <ul style="list-style-type: none"> ○ Screening ○ Quarantining of exposed or potentially exposed individuals ○ Testing 	<ul style="list-style-type: none"> • This interim guidance provides schools with advice for planning and operating during the 2021-2022 school year, including how they can adjust public-health measures in the context of COVID-19 vaccination in Canada, and has been developed in alignment with the federal/provincial/territorial public health response plan for ongoing management of COVID-19 that is based on current Canadian context, emerging evidence, and expert opinion • It is recommended that schools and institutions take a risk-based approach to COVID-19, and most evidence to date indicates that adherence to multiple layers of mitigation measures can be effective in limiting the transmission of SARS-CoV-2 in child and youth settings, including kindergarten to Grade 12 • Post-secondary institutions have experienced outbreaks among their student populations, in some cases leading to incidence above that of the local community, so it is important to maximize vaccination coverage in the school setting and in the community (among those who are eligible) before the start of the 2021-2022 school year, to reduce the risk of SARS-CoV-2 transmission and/or local outbreaks once in-person learning begins • PHAC recommends that operators and administrators use guidance outlined in this risk mitigation tool to assess the risk of COVID-19 in community settings based on local COVID-19 activity, physical characteristics of the setting, people who access the setting, and the activities and interactions that take place in the setting 	Last updated 17 August 2021

Type of document	Relevance to question	Key findings	Recency or status
	<ul style="list-style-type: none"> ○ Isolation of suspected or confirmed cases ○ Contact tracing 	<ul style="list-style-type: none"> ● The guidance also described adjusting public-health measures in the context of COVID-19 vaccination and provides advice on core measures such as hand hygiene and respiratory etiquette, and additional measures such as physical distancing, masking where appropriate, indoor ventilation, and cohorting ● For outbreak management, schools should have plans in place for early recognition of individuals potentially infected with COVID-19 and prevention of ongoing COVID-19 spread, in addition to established processes for symptom/case reporting, information sharing and supporting the regional/local public-health unit in their case-management and contact-tracing efforts as required ● Post-secondary institutions are unlikely to monitor class attendance or to track absenteeism due to the nature of the format of education delivery, and so in the event that case and contact management will be required, jurisdictions may wish to consider digital programs (e.g., web-based apps, QR codes) to assist in these public-health efforts, and standard protocols and plans for notification/reporting infections, contact tracing and isolation should be put in place in consultation with regional/local public-health units ● Additional considerations include communication strategies for K-12 and post-secondary students, staff and parents/guardians (e.g., reminders, stories, videos) that are age appropriate, inclusive, actionable and accessible, organized activities in the school setting, travel and/or international students, and post-secondary housing

Bain T, Bhuiya A, Al-Khateeb S, Wang Q, Mansilla C, Rintjema J, DeMaio P, Matthews M, Lavis JN, Wilson MG. Appendices for COVID-19 living evidence profile #3 (version 3.3): What is known about how schools (K-12) and post-secondary institutions (colleges and universities) adjust COVID-19 transmission-mitigation measures as infection rates change and vaccination rates increase? Hamilton: McMaster Health Forum, 23 September 2021.

To help health- and social-system leaders as they respond to unprecedented challenges related to the COVID-19 pandemic, the McMaster Health Forum is preparing rapid evidence profiles like this one. This rapid evidence profile is funded by the Public Health Agency of Canada. The opinions, results, and conclusions are those of the McMaster Health Forum and are independent of the funder. No endorsement by the Public Health Agency of Canada is intended or should be inferred.
